## ABOUT THE COURSE

Computational Geometry is a course that considers data structures and algorithms for spatial data sets, collections of points, lines, planes, polygons and polyhedra that live in 2 or 3 dimensional space. These data structures form the basis for modern work in Computer Graphics, Geographic Information Systems, and, to a lesser extent, Computer Vision and Machine Learning

**ABOUT THE COURSE**

The Internet of Things (IoT) and smart connected devices have radically changed the way our world works and how companies operate and create new businesses. In this course, we provide an overview of the underlying IoT technologies and their business applications. This course is an introduction to IoT and explains why it is a continuously evolving concept with many industrial applications. You will learn the fundamental building blocks of IoT and the fast-changing trends to combine them suitably for a precise industrial application. You'll learn an overview of what is Internet of Things (IoT) and how to develop a business model canvas. Description of typical IoT components and edge computing concept Communication standards and big data cloud infrastructure partners to choose in the case of IoT businesses. Security requirements and techniques in IoT systems. Different types of artificial intelligence (AI) technologies and edge AI systems in the context of IoT Design thinking concept and how-to setup the business model and venues in IoT

**COURSE OBJECTIVE**

Students will be explored to the interconnection and integration of the physical world and the cyber space. They are also able to design & develop IOT devices. This course focuses on the latest microcontrollers with application development, product design and prototyping. The Internet of things (IOT) is the next wave, world is going to witness. Today we live in an era of connected devices (mobile phones, computers etc.), the future is of connected things (Eg: home appliances, vehicles, lamp-posts, personal accessories, industrial equipments and everything which you use in day-to-day life). Internet of Things is a term given to the attempt of connecting objects to the Internet and also to each other - allowing people and objects themselves to analyze data from various sources in real-time and take necessary decisions in an intelligent fashion. This course will describe the market around the Internet of Things (IoT), the technology used to build these kinds of devices, how they communicate. how they store data, and the kinds of distributed systems needed to support them. Divided into four modules, we will learn by doing to start with simple samples and

integrate the techniques. And we learn into a class project in which we design and build an actual IoT system.

**EXCEPTED OUTCOME**

To understand the fundamental application areas of IOT. Able to realize the revolution of the Internet in Mobile Devices, Cloud & Sensor Networks. Able to understand the building blocks of the Internet of Things and its characteristics. After the completion of the course, the students will be able to design some IOT-based prototypes. Understand the definition and significance of the Internet of Things, Discuss the architecture, operation, and business benefits of an IoT solution, Examine the potential business opportunities that IoT can uncover, Explore the relationship between IoT, cloud computing, and big data, identify how IoT differs from traditional data collection systems. It provides advanced data collection, connectivity, and analysis of information collected & by computers everywhere taking the concepts of Machine Machine communication further than ever before. This course gives a foundation in the Internet of Things, including the components, tools, and analysis by teaching the concepts behind the IoT and a look at real-world solutions

## ABOUT THE COURSE

In this course, you are learning Python for data science, as well as programming in general. This beginner-friendly Python course will take you from zero to programming in Python in a matter of hours. Upon its completion, you'll be able to write your own Python scripts. You'll be able to write your own Python scripts and perform basic hands-on data analysis using our Jupyter-based lab environment. This Data Science with Python course is designed to equip you with skills to work with Python Programming to achieve Data Science tasks. You will be knowledgeable about the concept of statistics in detail, followed by a case study demonstration. You will then understand data transformation, different types of distributions, and histogram. Further learn Python programming to understand some essential libraries of Python, such as NumPy, Pandas, Matplotlib, and Seaborn. This course will also teach regression models, data analytics, and data visualization concepts. Test the knowledge you gain from this course by completing the quiz and receiving a course completion certificate.

## COURSE OBJECTIVE

In this module, you will be introduced to statistics which comes with data problems, whereas machine learning is used to solve these problems in this first module of the course. It also discusses some real-life scenarios of problems occurring with the data in statistics. Later you will understand three steps to process the information such as descriptive, predictive, and prescriptive. Descriptive statistics means describing the data without necessarily trying to build any prediction or model into it. In this module, it will help you understand descriptive statistics by giving real-life examples. Next, you will learn the term random variable. Lastly, that will familiarize you with the case study, which will be the main objective of the next module. The case study will be carried out in Jupyter Notebook. You will also understand the descriptive analytics required to create customer profiles for the organization. You will learn briefly about the problem statement and how you can derive the solution using Numpy and Pandas libraries in the Jupyter Notebook. This course describes measures of central tendency by

formulating to solve for the example and also analyzes various metrics of the solution through graphs

## EXPECTED OUTCOME

This course provides students with wide general overview of Python a general-purpose programming language that is becoming ever more popular for data science. The focus is on the application of Python specifically for data science. The course is about ways to import, store and manipulate data, and helpful data science tools to conducting data analyses. The course is intended for students with little programming background. The learning process is facilitated with DataCamp platform. Expected Learning Outcomes are Know basic data types in Python. Know operators, how to clean and merge datasets. Know pandas library, the main methods for Data Frames, Know how to import data in Python, Know how to work in Jupyter Notebook .

## ABOUT THE COURSE

Full-stack development is the process of designing, creating, testing, and deploying a complete web application from start to finish. It involves working with various technologies and tools, including front-end web development, back-end web development, and database development. Full Stack Development refers to the development of the front-end and back-end of a website. A full-stack developer is one who has good knowledge of front-end (HTML, CSS, and JavaScript) along with frameworks, and back-end (a programming language, APIs, NodeJS) integrating with databases (Oracle, MongoDB, and SQL). The front end is the UI (User Interface) part of the application; the back end takes care of the data management and servers. In this course, you will master skills like Java, Data Structures. HTML, CSS, React, Redux, Express, NodeJS, MongoDB, The advantage of being a full-stack web developer is, can master all the techniques involved in a development project, make a prototype very rapidly, provide help to all the team members, reduce the cost of the project and better understand all aspects of new and upcoming technologies.

## COURSE OBJECTIVE

Students should be able to Use their learned skills, knowledge and abilities to develop web sites for the internet. Apply basic design principles to present ideas, information, products, and services on websites. Apply basic programming principles to the construction of websites. Effectively manage website projects using available resources. Demonstrate communication skills, service management skills, and presentation skills. Apply employability skills including fundamental skills, personal management skills, and teamwork skills. Design user interactions on web pages. Develop back end website applications. Create servers and databases for functionality. Develop adaptive content for multiple devices (cell phone, tablets, etc.) Ensure cross-platform optimization for mobile phones. Ensure responsiveness applications. Work alongside graphic designers web design features. Manage a project from conception to finished product. Design and develop Application Programming Interfaces (APIs). Meet both technical and

consumer needs for a web development project. Learn to research new methods of development in web applications and programming languages.

## EXECPTED OUTCOME

Structure and implement HTML/CSS, apply intermediate and advanced web development practices, implement basic JavaScript, create visualizations in accordance with UI/UX theories, Develop a fully functioning website and deploy on a web server, Find and use code packages based on their documentation to produce working results in a project. Create web pages that function using external data, Architect solutions to programming problems by combining visual components and classes, Develop JavaScript applications that transition between states. Identify mobile strategies and design for multiple operating systems. Distinguishing trends in multi-device implementation. Create visualizations in accordance with UI/UX theories. Derive information from data and implement data into applications.

## ABOUT THE COURSE

This "Advanced Data Structures using Python" course provides a comprehensive explanation of different types of graph and various graph algorithms. Throughout the course, a step-by-step approach is followed to make you understand different algorithms. Through this course, you can build a strong foundation and it will help you to crack Data Structures and Algorithms in Python coding interviews questions and work on projects. A good foundation on Data Structures and Algorithms in Python interview topics helps you to attempt tricky interview questions. This Data Structures and Algorithms using Python course covers the following topics with Python implementation Trees AVL Tree, Threaded Binary Tree. Expression Tree, B Tree explained and implemented in Python. Graphs Adjacency matrix. Adjacency list. Path matrix, Warshall's Algorithm. Traversal, Breadth First Search (BFS), Depth First Search (DFS), Dijkstra's Shortest Path Algorithm, Prim's Algorithm and Kruskal's Algorithm for minimum spanning tree. The algorithms and examples are explained with figures and animations to simplify the learning of this complex topic. You will see code implementation of different data structures in Python and algorithms are explained in a step- wise manner.

## COURSE OBJECTIVE

Course Objectives are the fundamental design, analysis, and implementation of basic data structures, Basic concepts in the specification and analysis of programs, Principles for good program design, especially the uses of data abstraction, Significance of algorithms in the computer field, and Various aspects of algorithm development. To impart the basic concepts of data structures and algorithms, To understand concepts about searching and sorting techniques, To Understand basic concepts about stacks, queues, lists, trees and graphs. To understanding about writing algorithms and step by step approach in solving problems with the help of fundamental data structures. This course will teach you the necessary theory and applications to properly understand the advanced data structures that are critical to various problems and how to implement them. We'll also go hands-on and reveal tips and tricks for

optimizations, identifying the right approach and presenting convincing explanations.

## DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VALUE ADDED COURSE NAME: INTRODUCTION TO COMPUTATIONAL

THINKING & PROGRAMMING

VALUE ADDED COURSE SYLLABUS

**B.TECH. II YEAR-II SEM ACADEMIC YEAR: 2020-21**

### Course Objective:

- To help the students to develop their ideas into a robust step-by-step solution using adequate technology
- To introduce them to the concept of Computational Thinking – its key techniques/approaches.
- To give them an understanding of algorithms, flowcharts, sensors, development boards, programming through handson/DIY activities and exposure to various resources.

### Course Outcomes:

- Describe the internal operation of a basic processor, how a program is executed by a computer and computing trends.
- Analyze a problem then design and express its solution in such a way that a computer can effectively carry it out. (i.e. equip you with CT skills)
- Implement problem solutions as programs using basic control structures (sequence, conditional, iterative).
- Implement problem solutions as programs using basic data types and aggregate data types.
- Apply the CT concepts on case studies/problem-based scenarios through hands-on practice of the CT processes.

**UNIT-I :** Overview of Programming Languages and Basic Internal Operation of Computer High level programming languages (Python, C, Java) Basic computer organization (Processor, Memory, I/O) and how a computer execute a program (Machine instructions).

**UNIT-II:** Basic Program Structure: Control Constructs and Data Types Concepts of data types, variables; Pseudo-code and flowcharts; Sequences, Selection (if/else), iteration (for/while loop). Problem formulation - reducing something to a very simple set of characteristics to only focusing on the most relevant to the problem. Concept of functions/libraries and data structure.

**UNIT-III:** Concept – Algorithm Reformulating the problem into series of ordered steps through Identifying, analyzing, and implementing possible solutions with the goal of achieving the most efficient and effective combination of steps and resources. (Some common/useful examples: Sorting and searching.

## ABOUT THE COURSE

Deep Learning, also known as deep neural learning or deepneural network, is an aspect of artificial intelligence that depends on data representations rather than task-specific algorithms. It allows the user to run supervised, semi-supervised, and unsupervised learning.

## COURSE OBJECTIVES

Introduce to the basic concepts of neural networks. Identify and analyze the various types of neural networks and models of neuron and apply accordingly. Introduce the concept of deep learning and its types. Explore the concepts of applications of deep learning.

## EXPECTED OUTCOMES

Upon completing this course students will be able to:  
Analyze and apply the basic concepts of neural networks. Analyze various types of neural networks and use various activation functions to solve complex problems. Relate the concept of deep learning and its architecture. Design and carry out empirical analysis for various types of applications of deep learning systems

## ABOUT THE COURSE

Arduino is the physical programmable board. A wide array of sensor can be attached with this board and many third-party libraries can be linking with an Arduino sketch. Arduino hardware components are cheaper in relation with other controller architecture and programming language is easy. Arduino has greater academic applications. In this paper, the roles of Arduino among micro controller boards are investigated. First, different types of Arduino boards are identified. Second, different Arduino applications are identified from the literature reported in the literature are surveyed and analyzed. In the last we will also summarize the work done.

## COURSE OBJECTIVES

Arduino is a prototype platform based on an easy-to-use hardware and software. It consist of a circuit board, which can be programmed and a ready-made software called Arduino IDE, which is used to write and upload the computer code to the physical board. Arduino provides a standard form factor that breaks the functions of the micro-controller into a more accessible package.

## EXPECTED OUTCOMES

Students will be able to Learn the basics of electronics, including reading schematics Learn the Arduino programming language and IDE, program basic Arduino examples. Prototype circuits and connect them to the Arduino. Program the Arduino microcontroller to make the circuits work. Connect the Arduino microcontroller to a serial terminal to understand communication and stand-alone use. Explore the provide examples code and online resources for extending knowledge about the capailities of the Arduino microcontroller.

## ABOUT THE COURSE

Wearable sensors are sensors that are directly attached to human skin or clothes for gathering biological signals with the purpose of personal healthcare. Flexible thin films of MNPs are deposited on the proper substrates for temperature and pressure control as the health signals.

## COURSE OBJECTIVES

- To provide the basic understanding of measurement and instrumentation systems and the insight of the resistive sensors and its applications in real life.
- To introduce the concept of the reactive sensors and self-generating sensors and its applications in real life.
- To familiarize the characteristics, working principle and application of special purpose transducers.
- To impart the importance of smart sensors, sensor interface standards for wearable device applications and to provide a brief overview of the wearable technology and its impact on social life.

## EXPECTED OUTCOMES

- Gain the basic idea of measurements, characteristics and the errors associated with measurements.
- Demonstrate the concept of resistive sensors which can be employed for real life applications
- Realize the concept of reactive sensors employed for real life applications
- Understand the working principle of special purpose sensors and the need for developing smart sensors.
- Describe the taxonomy of the wearable devices and its design constraints for measuring physical and biological signals.
- Able to design and perform experiments on the sensors and develop the projects based on the customer needs.

## ABOUT THE COURSE

Printed circuit board (PCB) is a highly reliable and durable physical circuit design that has become an essential component of any electronic device. Printed circuit boards are made of a very thin substrate board embedded with electronic components interconnected using thin-layer of copper interconnecting traces. The board substrate is usually made of fiberglass composite epoxy substrate or other laminate materials. The circuit will contain both active and passive components. With more advanced and smaller component availability it is possible to accommodate a very large and complex circuit in a small PCB Design

## COURSE OBJECTIVES

This course will teach teams of students how to design and fabricate PCB for prototyping as well as in an Industrial Production environment. This will help students to innovate faster with electronics technology. Students will design their own PCB for a simple product of their choice, build simple prototypes of their design, and document their PCB design and prototyping. To stimulate PCB design concepts guest lectures will be invited to present a range of design challenges. Challenge areas will include consumer products and the needs of the developing world, sustainability, and other users of non-profit organization services.

## EXPECTED OUTCOMES

The students will be able to understand a single layer and multilayer PCB. To create and fabricate a PCB and Evaluate and test a PCB. To learn advantages and disadvantages of PCB

## ABOUT THE COURSE

Electrical drive technology converts electrical energy from the power supply system or from a battery into mechanical energy and transmits the resulting force into motion. Many applications that make our daily lives easier like lifts, escalators, gate drives, washing machines, mixers, electric razors.

## COURSE OBJECTIVES

Describe the structure of Electric Drive systems and their role in various applications such as flexible production systems, energy conservation, renewable energy, transportation etc., making Electric Drives an enabling technology.

## EXPECTED OUTCOMES

Clearly learn to use space vectors presented on a physical basis to describe the operation of an ac machine. 10. Understand the basic principles of Permanent Magnet AC (Self-Synchronous AC) drives.

## ABOUT THE COURSE

Archaeological chemistry is a subject of great importance to the study and methodology of archaeology. This comprehensive text covers the subject with a full range of case studies, materials, and research methods. With twenty years of experience teaching the subject, the authors offer straightforward coverage of archaeological chemistry, a subject that can be intimidating for many archaeologists who do not already have a background in the hard sciences. With clear explanations and informative illustrations, the authors have created a highly approachable text, which will help readers overcome that intimidation. Topics covered included: Materials (rock, pottery, bone, charcoal, soils, metals, and others), Instruments (microscopes, NAA, spectrometers, mass spectrometers, GC/MS, XRF & XRD, Case Studies (Provenience, Sediments, Diet Reconstruction, Past Human Movement, Organic Residues). The detailed coverage and clear language will make this useful as an introduction to the study of archaeological chemistry, as well as a useful resource for years after that introduction.

## COURSE OBJECTIVES

Archaeological chemistry is a subfield of archaeometry and involves the investigation of the inorganic and organic composition – elements and isotopes, molecules and compounds – of archaeological materials. Archaeological chemistry is primarily concerned with two main objectives: (1) characterization – measuring the chemical composition of a variety of prehistoric materials, and (2) identification – determining the original material of an unknown item. The goals and history of archaeological science, and the place of chemistry within it, are briefly described in an archaeological chemistry course. The most widely used analytical techniques in archaeology are set out and compared in the light of relevant applications

## EXPECTED OUTCOMES

Students would learn about the use of physicochemical instrumentation in solving archaeological problems, including (but not limited to) optical emission spectroscopy, atomic absorption spectrometry, inductively coupled plasma emission spectrometry, mass spectrometry, X-ray fluorescence spectrometry, analytical electron microscopy, proton-induced X-ray emission spectrometry, neutron activation analysis, infrared and Raman spectroscopy, and various chromatographic techniques

## ABOUT THE COURSE

This course presents an introduction to the biological basis of behaviour. We will introduce topics relevant to behaviour in the normal and abnormal states beginning with sensory perception, attention, movement, emotion and language with experimental examples from our lab and clinical studies/research illustrating the effects of impaired brain function. We will begin an introduction of topics such as: How do neurons change? How does plasticity occur in the brain? Can music and dance help brain function? What is neurorehabilitation ?

## COURSE OBJECTIVES

The Biological Basis of Behavior course is an introduction to the biological basis of behavior. The course objectives vary depending on the institution offering the course, but some common objectives include:

Understanding the structure and function of the nervous system in human and nonhuman animals.

Understanding the structure and function of the endocrine system.

Understanding the interaction between biological factors and experience.

Understanding methods and issues related to biological advances.

Introduction to the brain's input and output relationships.

Understanding how sensory information is processed in our brain.

Understanding how motor functions are accomplished

## EXPECTED OUTCOMES

The Biological Basis of Behavior course is an introduction to the anatomical structures and physiological processes that determine behavior. The course aims to provide students with a solid understanding of the principles and techniques used in this field, and to enable them to apply their knowledge to the analysis of behavior and its underlying biological mechanisms.

Some common learning outcomes for a Biological Basis of Behavior course may include:

Understanding the basic functioning of the nervous system

The ability to use scientifically valid resources to communicate effectively about the biological basis of behavior.

Knowledge of the acquisition and processing of sensory information, the neural control of movement, and the biological bases of complex behaviors

## DEPARTMENT OF BASIC SCIENCES AND HUMANITIES

VALUE ADDED COURSE NAME: **BIOLOGICAL BASIS OF**

**BEHAVIOUR**

### VALUE ADDED COURSE SYLLABUS

**B.TECH I YEAR-II SEM CSE**

**ACADEMIC YEAR: 2020-21**

#### Course objectives:

- The "biological factors" that create an impact on the biological behavior of the human being are self-preservation, reproduction, and survival.
- Self-preservation: self-preservation is the biological process of sustaining in critical conditions.

#### Course Outcome:

By the end of this course, students will be able to:

- Apply critical analysis skills to evaluate research studies and conclusions.
- Describe the fundamental concepts and major themes in how information is processed by the brain.
- Compare and contrast particular approaches to studying brain function with respect to their use to answer a particular research question.
- Understand the link between psychological and brain functioning.

#### Chapter 1: The Psychology of Human Sexuality

Sexuality is one of the fundamental drives behind everyone's feelings, thoughts, and behaviors. It defines the means of biological reproduction, describes psychological and sociological representations of self, and orients a person's attraction to others. Further, it shapes the brain and body to be pleasure-seeking. Yet, as important as sexuality is to being human, it is often viewed as a taboo topic for personal or scientific inquiry.

#### Chapter 2: Biochemistry of Love

Love is deeply biological. The evolutionary principles and ancient hormonal and neural systems that support the beneficial and healing effects of loving relationships are described here. Structure and function of neurons is a necessary foundation as you move forward in the field of psychology.

#### Chapter 3: The Brain and Nervous System

The brain is the most complex part of the human body. It is the center of consciousness and also controls all voluntary and involuntary movement and bodily functions. It communicates with each part of the body through the nervous system, a network of channels that carry electrochemical signals.

## ABOUT THE COURSE

Basic reading skills include the ability to identify and manipulate individual sounds in language; to identify printed letters and their associated sounds; to decode written language. Phonics is a set of rules that specify the relationship between letters in the spelling of words and the sounds of spoken language.

## COURSE OBJECTIVES

- The process of Reading skills phonics, phonemic awareness vocabulary, reading comprehension and fluency.
- These five aspects work together to create the reading experience.
- As children learn to read they must develop skills in all five of these areas in order to become successful readers.

## EXPECTED OUTCOMES

- Follow words from left to right, top to bottom and page to page.
- Name all the upper and lower case letters.
- Recognize rhyming words.
- Count, say, blend and break apart words that are spoken.
- Identify the front cover, back cover and title of a book.

## ABOUT THE COURSE

Business statistics is the application of statistics to analyze business data. Companies use business stats for forecasting, testing correlations, and describing data. A career in business statistics can be a good choice for people with strong math skills.

## COURSE OBJECTIVES

- Distinguish among different scales of measurement and their implications for solving problems
- Create tables and graphs to format, organize, and interpret data; summarize and present data
- Calculate and analyze numerical descriptive measures for a given data set
- Apply concepts of sample space and probability to solving problems
- Calculate measures of central tendency and variation; use statistical software to analyze results
- Identify methods of obtaining data and identify the advantages and disadvantages of each as applied to solving problems
- Calculate the mean and variance of a discrete distribution
- Distinguish between sample and population distributions, analyze the role played by the central limit theorem, and apply the central limit theorem to calculate standard error and determine the sampling distributions

## EXPECTED OUTCOMES

After completion of the course, learners would be able to:

- To summarize and analyze statistical data to solve practical business related problems.
- To interpret the relevance of statistical findings for business problem solving and decision making.
- To apply technology to statistical analysis and problem solving.
