ABOUT THE COURSE

In this course, you'll learn about the programming language known as R. You'll find out how to use R Studio, the environment that allows you to work with R. This course will also cover the software applications and tools that are unique to R, such as R packages. You'll discover how R lets you clean, organize, analyze, visualize, and report data in new and more powerful ways. Exploratory data analysis is an approach for summarizing and visualizing the important characteristics of a data set. Promoted by John Tukey, exploratory data analysis focuses on exploring data to understand the data's underlying structure and variables, to develop intuition about the data set to consider how that data set came into existence, and to decide how it can be investigated with more formal statistical methods. Data analysis becomes an essential part of everyday life. After this course, you will be able to conduct data analysis task yourself. Gain insights from the data. R-widely used tool for data analysis and visualization. R is rapidly becoming the leading programming language for effective data analysis and statistics. It is the tool of choice for many data science professionals in every industry

COURSE OBJECTIVES

The fundamental of course you will feel much more comfortable programming in other languages as well This is because R is a fully empowered programming language itself. Main programming concepts presented Various data types. Conditional statements and For and While loops. Finally, data mining and data science techniques in R are delivered in a clear fashion together with assignments to make sure you understand t Main statistical capabilities behind data science covered Data Analytics with R training will help you gain expertise in R Programming. Data Manipulation, Exploratory Data Analysis. Data Visualization, Data Mining. Regression Sentiment Analysis, and using R Studio for real-life case studies on Retail, Social Media. n this course, you will learn about the basics of statistical computing and data analysis how to

use R for analytical programming. How implement data structure in R. R loop functions and debugging tools. Object-oriented programming concepts in R. Data visualization in R. How to perform error handling. Writing custom R functions.

EXPECTED OUTCOMES

Examine the benefits of using the R programming language. Discover how to use R Studio to apply R to your analysis. Explore the fundamental concepts associated with programming in R. Explore the contents and components of R packages including the Tidyverse package. Gain an understanding of data frames and their use in R. - Discover the options for generating visualizations in R. Learn about R Markdown for documenting R programming After competing this course, you will be able to: Explain critical & programming concepts. Demonstrate how to install and configure Studio, Apply OOP concepts in R programming, Explain the use of data structure and loop functions. Analyse data and generate reports based on the data. Apply various concepts to write programs in R

ABOUT THE COURSE

Python is an Interpreted, object-oriented programming language similar to PERL, that has gained popularity because of its clear syntax and readability. Python is said to be relatively easy to learn and portable, meaning its statements can be interpreted in a number of operating systems, including UNIX-based systems, Mac OS, MS-DOS, OS/2, and various versions of Microsoft Windows 98. Python was created by Guido van Rossum, a former resident of the Netherlands, whose favorite comedy group at the time was Monty Python's Flying Circus. The source code is freely available and open for modification and reuse. Python has a significant number of users. The Python Programming course comprises sessions dealing with syntax, variables and data types, operators and expressions, conditions and loops, functions, objects, collections, modules and packages, strings, pattern matching, exception handling, binary and text files, and databases. Exercises and examples are used throughout the course to give practical hands-on experience with the techniques covered. We're going to jump right into it so you can start coding your first Python program as soon as possible.

COURSE OBJECTIVES

This course aims to provide the delegate with the knowledge to be able to produce simple computer programs that demonstrate an understanding of the three core principles of programming sequence, selection, and iteration. Delegates will also be exposed to functions, objects, and both procedural and object-oriented programming paradigms. The course further aims to prepare delegates to go on to learn any one of many programming languages in detail. This introduction to Programming-Python course is designed for those new to programming, to learn about the terminology structures, and principles of programming generally. Build basic programs using fundamental programming constructs like variables, conditional logic, looping, and functions. Work with user input to create fun and interactive programs. Create simple games with images, animations, and audio using our custom beginner-friendly programming library. The learning objectives of this course are to understand why Python is a useful scripting language for developers.

To learn how to design and program Python applications, how to use list, tuples, and dictionaries in Python programs and how to identify Python object types.

EXPECTED OUTCOMES

Make use of the python programming language to construct basic programs. Know how to use collections such as list, tuple, range, dictionary and sets. Make use of functions, classes and objects from those classes. Understand the concepts of inheritance and polymorphism for code reusability and extensibility. Write robust code using exception handling. Create and animate a variety of shapes and develop an application with graphical user interface GUI. Extend the knowledge of python programming to build successful career in software development. The goal of the course is to introduce students to Python Version 3.x programming using hands on instruction. It will show how to install Python and use the Spyder IDE (Integrated Development Environment) for writing and debugging programs. The approach will be to present an example followed by a small exercise where the learner tries something similar to solidify a concept. At the end of each module there will be an exercise where the student is required to write simple programs and submit them for grading, its intended for students with little or no programming background, although students with such a background should be able to move forward at their preferred pace.

ABOUT THE COURSE

Nowadays advancement of technology is rapidly increasing and people want to do tasks in a smart way. So, people are thinking about quick ways of solving Daily life tasks. This will result in a technology that can control domestic and industrial applications using IoT. The increase in demand for service over the Internet necessitated data collection and exchange in an efficient manner. In this sense, the Internet of Things (IoT) has promised the ability to provide efficient data storage and exchange by connecting physical devices via electronic sensors and the Internet. The course is designed to build simple circuits around the Arduino Uno. that implement simple functions. Write simple Arduino sketches that can get sensor readings. make LEDs blink, write text on an LCD screen, read the position of a potentiometer, and much more. Understand what is the Arduino. In this course, you will learn A basic understanding of what is the Internet of Things, IoT Terminology. What is the Arduino IoT Cloud Platform, How to set up your Arduino MKR boards to connect to the Arduino OT Cloud, How to use the Arduino Internet of Things (IoT) Cloud Platform to build IoT apps with minimal code. How to build dashboards to monitor your Internet of Things (IoT) projects, peripherals and sensors, How to incorporate Webhooks in your Internet of Things (IoT) Applications. How to use the If This Then That (FTTT) to integrate services into your IoT Applications

COURSE OBJECTIVES

The fundamentals of the program Arduino to control lights, motors, and other devices. To learn Arduino's architecture, including inputs and connectors for add-on devices. To add third-party components such as LCDs, accelerometers, gyroscopes, and GPS trackers to extend Arduino functionality. To understand various options programming languages, from C to drag-an languages. To test, debug, and deploy the Arduino to sve" real-world problems. To acquire basic knowledge sensors and their hardware. Practical hands-on exper with interfacing sensors. Simple programming languagud study the sensor operation. The objective of this course is to gain knowledge on the importance of the Internet of Things (IoT), the current components of typical IoT devices

and + nds for the future. The contents focus on lot des. design constraints, Interfacing between the physical world and devices and further implementation and intergradations of IoT ecosystems

EXPECTED OUTCOMES

Recall the basics of sensors and their functioning. Execute basic and advanced assembly language programs. Learn the ways to interface VO devices with processors for task sharing Recall the basics of co-processor and its ways to handle float values by its instruction set Recognize the functionality of microcontrollers, the latest version processors and its applications. Acquire design thinking capab ty, the ability to design a component with roastic constraints, to solve real- world engineering problems and analyses the results. You will learn to design lot components which would allow them to innovate new designs and products. IoT has revolutionized the digital world, by connecting all things together Arduino is Open Source electronic prototyping platform. It is one of the most favour platforms with easy-to-use hardware and software. Arduino family has many ready-to-use hardware prototyping boards and one of the most versatile board is Uno popularly known as Arduino Uno.

ABOUT THE COURSE

Problem-Solving is a scientific technique to discover and implement the answer to a problem. The computer is the symbol-manipulating device that follows a set of commands known as the program. The problem that we want to solve can come from any real-world problem or perhaps even from the abstract world. We need to have a standard systematic approach to problem-solving through programming in C.

This course is aimed at enabling the students to formulate simple algorithms for arithmetic and logical problems, translate the algorithms to programs (in C language), test and execute the programs and correct syntax and logical errors. Implement conditional branching, iteration and recursion, decompose a problem into functions and synthesize a complete program using divide and conquer approach, use arrays, pointers and structures to formulate algorithms and programs, apply programming to solve matrix addition and multiplication problems and searching and sorting problems, apply programming to solve simple numerical method problems, namely root finding of function, differentiation of function and simple integration. This course covers: Introduction to Problem Solving through programs, Flowcharts/Pseudo codes, the compilation process, Syntax and Semantic errors, Variables and Data Types, Arithmetic expressions, Relational Operations. Logical expressions; Introduction to Conditional Branching. Functions and Parameter Passing by Value, Passing Arrays to Functions, Call by Reference, Recursion, Structures and Pointers, Self-Referential Structures and Introduction to Lists.

COURSE OBJECTIVES

This course focuses on utilizing decision-making and branching concepts to derive solutions for given problems. It covers the effective use of inbuilt functions for input and output operations, implementation of arrays, problem-solving with pointers, efficient file handling, and data structure utilization for problem solving. Topics include structures, unions, stacks, queues, linked lists, trees.

graphs, and algorithm creation, along with their travel and representation. The course aims to develop problem-solving abilities and analytical skills for real-life scenarios, prepare students for the software industry, foster research and development knowledge in computer science, and cultivate successful careers and entrepreneurship in the field. It also emphasizes algorithm formulation, pseudocode and flowchart creation, structured programming, and fundamental programming concepts using the 'C' language.

EXPECTED OUTCOMES

After completing this course, you will be able to write efficient algorithms to solve various problems. Understand and use various constructs of the programming language such as conditionals, iteration, and recursion. Implement your algorithms to build programs in the C programming language. Use data structures like arrays, linked lists, and stacks to solve various problems. Understand and use file handling in the C programming language. To understand the various steps in program development. To understand the basic programming language. To learn how to write more readable C programs. To structured programming approach in C to solve problems. You will master the basic knowledge on hypothesis-based problem solving that will let you proceed to more advanced courses on solving business problems.

ABOUT THE COURSE

This course is for anyone passionate in learning how a hardware component can be adapted at runtime to better respond to users/environment needs. This adaptation can be provided by the designers, or it can be an embedded characteristic of the system itself. These runtime adaptable systems will be implemented by using FPGA technologies. Within this course we are going to provide a basic understanding on how the FPGAs are working and of the rationale behind the choice of them to implement a desired system.

COURSE OBJECTIVES

Understand the the varieres prPSOC The objectives of the course are to: Learn Programmable Routing and Interconnect. Designer for configur analog modules.Explain the Vare and software components or components.Learn the P501361 signal Components. PSoC Software Components.

EXPECTED OUTCOMES

After studying this course, students will be able to:
Explain the basic concepts and families of PSOC. Recognize the various features of PSOC architecture and programmable blocks. Analyze the various features of PSoC Designer for configuring the digital and analog modules Design the hardware and software components for mixed signal components. Develop the programming skills for interfacing various VO modules to PSOC.

ABOUT THE COURSE

LED lighting is integrating into our day-to-day lives and becoming the go-to lighting solution for many homes in the UK. LED manufacturers are working with extreme care and quality control to ensure only the highest standard lighting reaches end consumers. Let's take a further look into the LED lights manufacturing process.

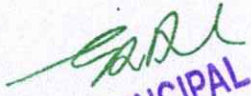

COURSE OBJECTIVES

- To understand the basics of power electronics and their usage in lighting controls, LED power supplies, and LED drivers.
- To know about Special safety and handling precautions to be taken during LED luminary testing.
- Identify dysfunctional components through visual inspection and by use of multi-meter
- To understand various electronic & electrical components, materials, and their specific properties & usages.

EXPECTED OUTCOMES

This course involves the practical application of Electronics. It will boost the skill development credibility and improve the ability of the students in repairing electrical components used in day-to-day life. Finally, students will be able to assemble and repair an LED bulb on their own.

ABOUT THE COURSE

An energy audit is completed at a residential or commercial building to determine its energy efficiency. Simply put, energy efficiency means using less energy to do the same job. The audit will provide you with a complete electricity consumption and energy efficiency assessment.

COURSE OBJECTIVES

- Draw conventional symbols for various electrical installations.
- To quote the relevant IE rules for a given electrical installation, earthing and clearance of service lines.
- Estimate the quantity of materials required for domestic and industrial wiring.
- Explain the concept and types of Energy of energy audit.
- Explain the energy saving opportunities in Transformer, Induction motor, lighting and DG system.
- Explain the roll of power factor controller in energy saving system.
- Explain the roll of sensors in energy saving system.
- Explain the energy efficient technologies in electrical system.

EXPECTED OUTCOMES

- List various energy sources and compare global and national scenarios on energy consumption.
- Explain energy conservation and its importance
- Understand the basic knowledge of different terms & principles of energy conservation, audit and management.
- Identify and assess the energy conservation / saving opportunities in different electric system.
- Prepare energy audit report for different energy conservation instances.

ABOUT THE COURSE

Networks are becoming critical components of business success - irrespective of whether you are small or BIG. When network fails, customers and employees cannot communicate, employees cannot access critical information or use basic print or email services, resulting in productivity loss and revenue loss. Network monitoring software tools reduce network outages and allow businesses to operate more fluently, cut costs, and prevent revenue loss. And for those who are small and are not allowed to think of a budget for network monitoring software, a better alternative is to start with open source and freeware network monitoring software that reduce the time and money spent on network administration and management

COURSE OBJECTIVES

- Building an understanding of the fundamental concepts of computer networking.
- Familiarizing the student with the basic taxonomy and terminology of the computer networking area.
- Introducing the student to advanced networking concepts, preparing the student for entry Advanced courses in computer networking.
- Learning about different network protocols and network standards.

- Describing network communication principles like TCP/IP, DNS, and ports.
- Understanding different network types and topologies.
- Gaining knowledge about different types of network devices used in a network.

EXPECTED OUTCOMES

- Understanding Networking Fundamentals
- Network Design and Architecture
- Network Configuration and Management
- Network Security
- Network Monitoring and Performance Optimization
- Wireless Networking
- Cloud and Virtualization Integration

ABOUT THE COURSE

This materials processing module is designed to offer a generic and broad view of the way humans change materials. The module differs from a traditional "unit" shop approach in a specific material as various materials use similar processing techniques. For example, separating (cutting) is a generic concept. Ceramic, polymer, wood, metal, and composite materials are all separated, often by similar techniques, such as sawing. This module focuses on materials one of the seven resource inputs in the systems model. Reference to the systems model will be made within the context of this content area.

COURSE OBJECTIVES

- Understand current structural lightweighting trends and associated challenges
- Gain essential knowledge for critically evaluating emerging dissimilar materials joining techniques for their own applications
- Apply basic joint design principles for improved manufacturability and joint performance
- Implement effective joint performance evaluation techniques for supporting design and manufacture of multi-materials structures

EXPECTED OUTCOMES

- Critically analyse fundamental elements of a range of complex processing techniques needed to independently create advanced materials.
- Demonstrate expert autonomous judgement on the most appropriate manufacturing processes and materials for given products.
- Critically evaluate the complex considerations involved in sustainable materials design.
- Demonstrate advanced knowledge of the advantages and limitations of different manufacturing methods.
- Develop specialised skills in advanced experimental techniques and expert knowledge in materials science.

ABOUT THE COURSE

AutoCAD is industry-leading commercial CAD software. AutoCAD is used by AEC(Architecture, Engineer, and Construction) to generate and optimize 2D and 3D designs. AutoCAD is a widely used software program that can help you draft construction documentation, explore design ideas, visualize concepts through photorealistic renderings, and simulate how a design performs in the real world. AutoCAD was first released in December 1982 as a desktop app. In 2010, AutoCAD was released as a mobile- and web app, marketed as AutoCAD 360. (Autodesk and AutoCAD)

COURSE OBJECTIVES

- To impart the parametric fundamentals to create and manipulate geometric models using curves, surfaces and solids.
- Demonstrate basic concepts of the AutoCAD software.
- Apply basic concepts to develop construction (drawing) techniques.
- Ability to manipulate drawings through editing and plotting techniques.
- Understand geometric construction
- Produce template drawings
- Produce 2D Orthographic Projections
- Understand and demonstrate dimensioning concepts and techniques
- Understand Section and Auxiliary Views

- Become familiar with the use of Blocks, Design Center, and Tool Palettes
- Become familiar with Solid Modeling concepts and techniques.

EXPECTED OUTCOMES

- To impart fundamental knowledge to students in the latest technological topics on Computer Aided Design, Computer Aided Manufacturing and Computer Aided Engineering Analysis and to prepare them for taking up further research in the areas.
- To create congenial environment that promotes learning, growth and imparts ability to work with interdisciplinary groups in professional, industry and research organizations.

ABOUT THE COURSE

India is slowly emerging as the hub for various outsourced works, and there is an increased requirement of translation to various foreign languages. As the internet has become an inseparable part of our lives, various online dealings such as digital management and customer support services are also taking place in foreign languages. Learning a foreign language widens the horizons by allowing one to explore different fields.

COURSE OBJECTIVES

- Ability to be comfortable with English in use while reading or listening.
- Ability to use receptive skills through reading and listening to language and literature. Ability to write and speak good English in all situations.
- Students should develop style in speech and writing and manipulate the tools of language for effective communication.
- The course should provide exposure to the learners in Good Prose texts and Poems and expose the learners to value based ideas

EXPECTED OUTCOMES

By the end of this course, students will be able to:

- Basic proficiency in the understanding and use of a foreign language.
- Knowledge of the distinctive features of culture(s) associated with the language they are studying
- Students decipher the mechanism of language and use it for success in competitive examinations and job related speaking and writing tasks.

ABOUT THE COURSE

Geophysics incorporates a wide range of specialized fields of study. Some of the topics that you can cover in a geophysics course include: Geophysical methods: Methods used in exploration and research, including seismic surveys, gravity and magnetic surveys, electrical resistivity methods, and ground-penetrating radar.

COURSE OBJECTIVES

The course objectives of a geophysics course can vary depending on the level and specific focus of the course, but some common objectives may include:

1. Understanding Earth's subsurface: To study and gain insights into the structure and composition of the Earth's subsurface, including the distribution of rocks, minerals, and fluids.
2. Data acquisition and interpretation: To learn methods of collecting geophysical data using techniques such as seismic surveys, electromagnetic surveys, and gravity measurements, and to interpret this data to make inferences about subsurface properties.
3. Exploration and resource assessment: To apply geophysical methods for locating valuable resources like minerals, oil, and groundwater, and assessing their quantities and qualities.
4. Environmental and hazard assessment: To use geophysics for assessing and mitigating environmental issues, such as groundwater contamination, and for understanding natural hazards like earthquakes and volcanic eruptions.

5. Geophysical instrumentation: To become familiar with the equipment and technology used in geophysics, including seismometers, gravimeters, magnetometers, and ground-penetrating radar

EXPECTED OUTCOMES

- Explain the basic physical principles of geophysical exploration methods.
- Demonstrate how geophysical methods can be applied for ore deposit exploration and characterization
- Select appropriate geophysical exploration techniques suitable for a range of different geological environments and ore deposit types.
- Manage a range of geophysical datasets as applied to ore deposit exploration and characterization

ABOUT THE COURSE

The Focus in Green Chemistry provides students with the opportunity to emphasize green chemistry as part of any chemistry specialist or major program they are enrolled in. An understanding of green chemistry principles is integral to meeting several of the United Nations Sustainable Development Goals, particularly those centered around affordable energy, climate action, clean water and sanitation, responsible consumption and production, and good well-being. As such, green chemistry broadly concerns the design and redesign of products and processes to reduce their impact on human health and the environment.

COURSE OBJECTIVES

One of the objectives of this course is to provide the student knowledge about the principles for Green Chemistry. Central topics will include the reduction of waste, use of renewables, catalysis, substitution of hazardous and dangerous chemicals with more benign alternatives etc.

EXPECTED OUTCOMES

Upon completing the course, the candidate should have obtained the following learning outcome:

- Knowing the 12 principles of Green Chemistry.
- Be able to describe classes of the most important chemicals (both organic and inorganic) that are hazardous/dangerous for human and animal health, and the environment.
- Identification of greener solvents and recycling of these including catalysts.
- Calculate the atomic efficiency and E-factors of chemical reactions and processes.

ABOUT THE COURSE

Algorithmic Problem Solving in Complex Scenarios refers to a course or educational program that focuses on developing advanced problem-solving skills using algorithms in complex and challenging scenarios. It builds upon the foundational knowledge of computational thinking and programming and delves into more complex problem domains.

In this course, participants learn how to tackle problems that involve large datasets, intricate constraints, and sophisticated algorithms. They are exposed to various real-world scenarios where algorithmic thinking and problem-solving skills are crucial.

COURSE OBJECTIVES

1. Develop a deep understanding of advanced algorithms and data structures.
2. Enhance problem-solving skills in complex programming scenarios.
3. Apply algorithm analysis techniques to evaluate algorithm efficiency.
4. Design and implement efficient algorithms for various complex problems.
5. Explore optimization techniques for problem solving scenarios

EXPECTED OUTCOMES

- Develop Advanced Algorithmic Knowledge Students will gain a deep understanding of advanced algorithms, including their design principles, analysis techniques, and efficient implementation.

- Apply Advanced Data Structures: Students will be able to select and implement advanced data structures suitable for solving complex programming problems efficiently.
- Solve Complex Problems: Students will acquire the ability to analyze complex problem scenarios, design algorithmic solutions, and implement those using appropriate programming languages. Evaluate Algorithm Efficiency. Students will learn to analyze and evaluate the efficiency of algorithms, considering factors such as time complexity, space complexity, and optimization techniques.

ABOUT THE COURSE

Inbound marketing is a method of growing your business by building lasting relationships with consumers, prospects, and clients by “pulling” them to your brand via SEO, content marketing, social media, video marketing, and more. It is often divided into four stages: attract, convert, close, and delight. The biggest reason why inbound marketing strategies are effective is “pull power.” Instead of advertising to the customer, as traditional outbound marketing does, inbound marketing focuses on creating reasons for the customer to come to you. You can do this by publishing helpful content, personalizing your social media pages and website copy, and trying out other techniques discussed below. Let’s talk about what inbound marketing is, the most effective inbound marketing strategies, and how you can use these to grow your business or startup.

COURSE OBJECTIVES

- Understand the conceptual framework of Digital Marketing
- Understand How Customers behave in digital space
- Understand the concepts of Value Creation, delivery and communication in digital space
- Legal and Ethical Issues in Internet Marketing
- Understand the workings of paid advertisement and search engine optimized advertisements on popular search engine.
- Understand how to use web analytics and the concept of ROI in Digital space
- Understand the usage of Social Media
- This course helps the companies to increase brand awareness, drive sales and/or leads

EXPECTED OUTCOMES

The main goal of successful inbound marketing campaign is to attract and engage more customers, generate more leads, nurture leads, build trust and credibility, raise brand awareness which attracts customers, and foster long-term customer relationships.

At the end of this course, students would be able to:

1. Understand the concept of digital marketing and its real-world iterations
2. Articulate innovative insights of digital marketing enabling a competitive edge
3. Understand how to create and run digital media based campaigns
4. Identify and utilize various tools such as social media etc.
